

LETOGLED M1 UAV SERIES

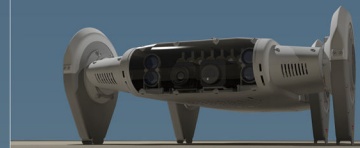

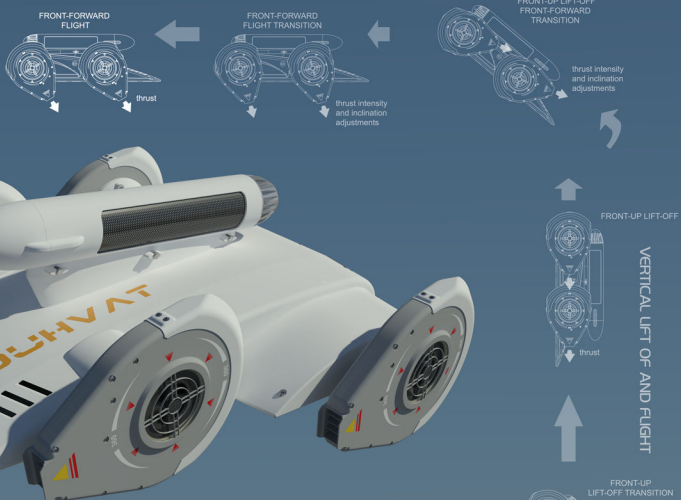

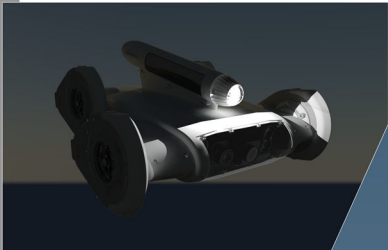

LETOGLED is new proprietary VTOL UAV concept which, differently from conventional UAVs or VTOLs, do not use propellers but instead Nikola Tesla inspired enclosed proprietary impeller.

LETOGLED is much safer to use as it does not present acute danger for people and animals and it cannot inflict any kind of serious injuries in general. This kind of propulsions system is much more efficient than conventional rotor based propulsion systems and in combination with unique 360° thrust rotation it provides unique high performance and high maneuverability flying vehicle.

As such LETOGLED UAV family is a first step in creation of truly functional personal manned flying vehicles (flying cars).

Reach us and find out how you can become part of future.

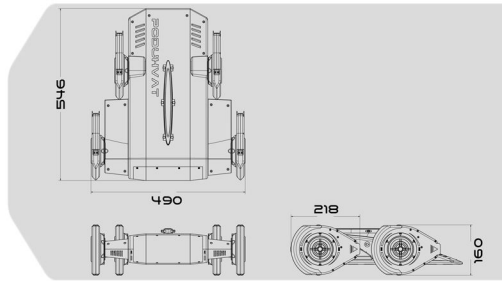

LETOGLED M1 K

LETOGLED M1 PK

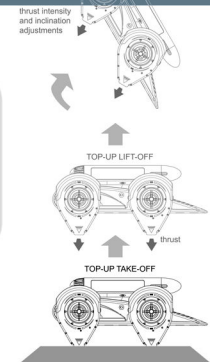

LETOGLED M1 PKS

Advantages over conventional UAVs:

1. Higher safety of usage
2. Higher survivability
3. Higher maneuverability
4. Higher power output per rotor size
5. Higher efficacy
6. Higher range
7. Higher flight ceiling
8. Higher lifting capability
9. Higher application versatility
